

MULTI-FUNCTION AND LOW PROFILE SHELF

The Multi-function Shelf is designed for flat or sloped storage. This adjustability is achieved by inverting and reversing the end supports. Low Profile Shelves mount in the flat position only.

Installing a flat shelf

1. With the flat side up, engage the left-hand end support bracket into the left-hand side of the frame at designated height. Push down to securely set. Repeat with the right-hand bracket into the right-hand side of the frame. (Figure 1)

2. Place the fronts of the end support brackets under the front lip of the shelf, making sure that both end brackets are positioned between the shelf ends and the bracket mounting flanges. Push the rear of the shelf down to securely seat in the brackets' rear cut-outs. (Figure 1)

Installing a sloped Multi-function Shelf

3. With sloped sides up, engage the left and right-hand end support brackets into the frame per paragraph 1. Continue with shelf installation per paragraph 2.

Dissipative Finish Shelf

A dissipative finish shelf includes an ESD Cable Kit Assembly (CKA) used to electrically ground the shelf.

1. Using the 1/4-20 sems screw provided, attach one end of the coiled cord to the threaded insert located on the back left-hand corner of the shelf and the other end to one of the frame's two threaded grounding locations or other appropriate path to ground. Tighten screws. (Figure 2)
