

GENERAL TASK LIGHT

CAUTION: Injury to persons and damages to the light and/or mounting surface may result if the light is pulled from the surface.

Always mount light only to a surface that is mechanically sound to reduce likelihood of such injury or damage.

1. Insert mounting rails into lance tabs on both ends of the light so approximately 2" of rail extend out beyond the rear of the shelf.

2. Rest the front of the mounting rails on the front lip of the shelf.

3. At the back, bend mounting rails outward and push light up against the shelf, then release rails under rear lip of shelf.

4. The mounted shelf can be moved left or right and front to back depending on personal preference.

5. Route cord down along panel joint and secure to hanger frame with cord managers. Plug cord into electrical receptable.

Note: LBS13 product required when mounting task lights under a storage cabinet (SCA). The LBS13 provides longer spring bars (13" long) than the standard 11". The 13" bars mount in the same manner as directed above.

General Task Light Hardware Pack - TLGHP (#97042301)
