## Panel End Cover

Product Numbers
• ECxx

Hardware Pack: none

Required Tools
• ¼"Allen Wrench or ¼" Hex Bit with driver

On the end of the frame, place the Panel End Cover top draw block over the top wedge block of the UltraFrame.

Loosen the Allen screw at the top of the End Cover with a **¼" Allen wrench** (2a) until the bottom draw block of the end cover clears the bottom wedge block of the UltraFrame (2b).

Tighten the Allen screw in the top of the Panel End Cover (3a), ensuring that the end cover bottom draw block captures the UltraFrame bottom wedge block (3b). *Note: Overtightening the top allen screw may cause the end cover to bow.*
