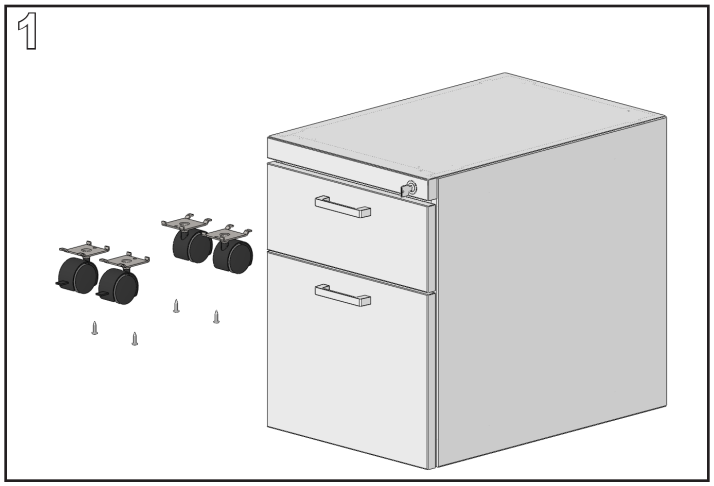
Mobile Pedestals

Product Numbers
- PMD612
- PMD666

Required Tools
- #2 Phillips Screwdriver

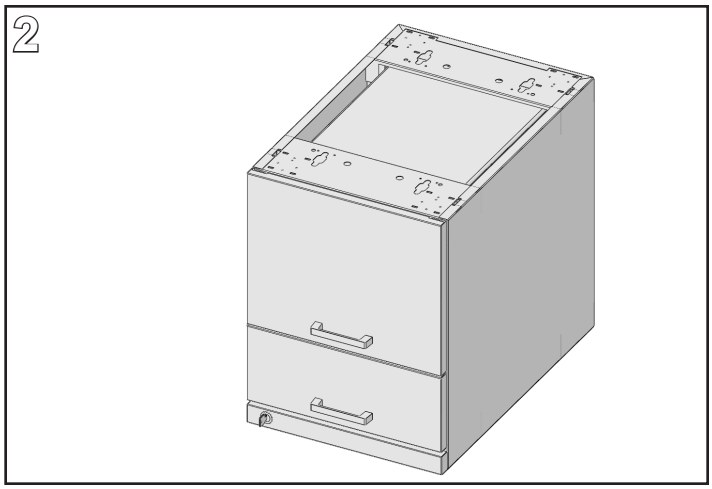
Hardware Pack: none

1



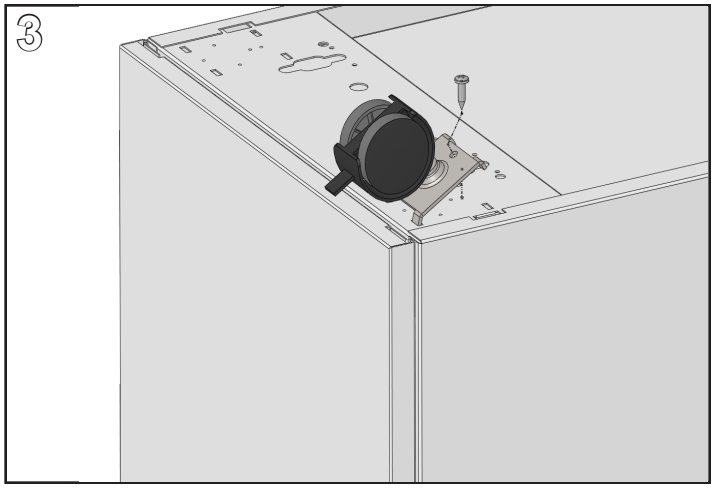
Locate the casters and attachment screws in one of the drawers of the pedestal. Lock or remove the drawers to ensure that they are not damaged during caster installation.

2



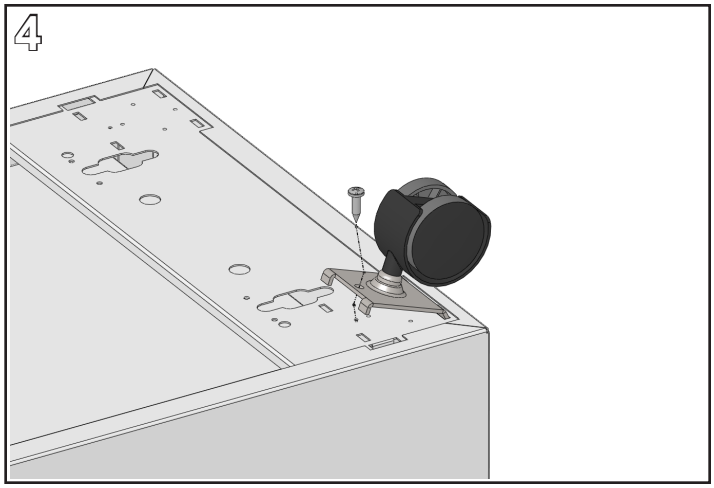
To avoid injury or damage to the unit use two people to flip the pedestal upside down or place it on its side to access the underside of the unit.

3



Attach two locking non-swivel casters to the front of the pedestal by inserting the offset tabs into the slots closest to the front edge of the pedestal and rotating until the straight tabs engage in the other slots. Rotate the caster lock if necessary to access the caster plate screw hole. Fasten caster plate to the pedestal bottom by installing a screw in each caster plate using a #2 Phillips Screwdriver.

4



Repeat step #3 with the non-locking swivel casters at the rear of the pedestal.

Hanging Pedestals

5

Using two people, carefully return the pedestal to its upright position.
